- Redis | Docker
- Heroku | AWS EC2
- HTML | CSS | Pug
- JWT Auth | REST API | MVC
- Unit Testing | TDD | Jest
- Python | Linux
- Data Structures | Algorithms
- Website Performance Optimizations
- Writes Readable and Scalable Code

EXPERIENCE

Full Stack Developer

VAP Technology, February 2017 – Present

- Developed and maintained REST API services responsible for handling ~5000 requests per second
- Updated several node APIs for performance and reduced payload size from 500KB to 200KB
- Added JWT authentication with RS256 algorithm to an API. Used bcrypt to encrypt passwords.
- Created internal tools to facilitate the manipulation and modification of data
- Integrated back-end to the front-end Deployed project to the Heroku and AWS EC2.
- Implemented lazy loading in a React app for improved performance
- Added caching to a project which resulted 90% performance boost.
- Helped and encouraged new hires to understand the structure of the project codebase.
- Recommended great tools which reduced development time and improved delivery.
- Brainstormed new ideas with other colleagues to solve problems.
- Presented and explained project structure to the team lead
- Delivered quality tested Application in tight production cycles
- Held additional responsibility as Tech Support.

EDUCATION

Bachelor of Science – Computer Science

West Bengal State University
